Please note that these instructions for referencing images are primarily for students doing assignments at Curtin University. They are not intended for those who are publishing (e.g. PhD, journal article) or making their work publicly available. In this case, written permission to reproduce figures and tables must be obtained from the copyright holder. Please see the AMA Manual of Style for more information.

Below is a suggested format for referencing a reproduced figure or table in the Vancouver style. Please confirm with your Lecturer/tutor that this is acceptable before submitting your assignment as they may have different requirements than those outlined.

**In-text:** Include the citation number after the title caption for the image.

Figure 3. Number of hospitalisations for minimal trauma hip fracture¹

![Graph showing number of hospitalisations for minimal trauma hip fracture over years.](image)

**Reference list:** Include the source of the image in the reference list.

If referencing a figure or table from a book, journal article, website or other source, follow the reference list examples in the Vancouver referencing guide.
